

Skies Across Cultures: Visualizing Constellation Patterns Across Different Sky Traditions

- 1. Quality of data selection, cleaning, preparation, and documentation**
 - a. I like that the data is a combination of two different datasets. This allows for more variety to the data and wider representation of the different cultures.
 - b. I also like how the data can be broken down into key aggregate statistics using the JSON files.
 - c. I would like to read how the data was cleaned, knowing what language or tools were used would be nice to know.
- 2. Appropriate selection of tools, algorithms, workflows, and parameter values**
 - a. Knowing how the data was cleaned and processed as well as how the visualizations were created would be nice.
 - i. “Initial plots were static matplotlib figures”, are they generated using Matplotlib?
- 3. Quality of data analysis, visualization results, and discussion of insights gained**
 - a. Humanoid and mammal categories might overlap in terms of representation. How are these “hybrid” figures handled in the data?
- 4. Completeness and quality of validation and redesign**
 - a. The dendrogram is a little hard to interpret since there are more than 5 colors in the legend.
 - b. Some of the text inside of the bubbles are hard to read and overlap with others.
 - c. I would recommend adding values to the ends of the bars in the “Constellations per Sky Culture” similar to the “Semantic Categories of Constellations”. Since there are many records, it’s difficult to line up where they fall on the chart.
- 5. Overall quality of content, including the accuracy and completeness of information, the expressiveness and clarity in communication of ideas using text and visualizations, and the appropriateness of references to/attribution(s) for the work of others**
 - a. Overall great analysis of the visualizations and descriptions of what they represent for the reader.
 - b. While the opening paragraph is accurate, the first sentence can be reworded to grab the reader’s attention. For example, instead of “focuses on exploring” try “analyzes” or “charts”.
